

Mohd Sami Ur Rasheed, PhD

Postdoctoral Fellow

Symptom Research

MD Anderson Cancer Center

Opioid-sparing Effects of the Nrf2 Activator Diroximel Fumarate in Mice

Dr. Rasheed obtained his PhD in Biological Sciences from the Academy of Scientific and Innovative Research (India) in 2020 where he studied the role of Nrf2-Keap1 pathway in Parkinson's disease.

Developing a keen interest in understanding the role of Nrf2 as a therapeutic approach in the treatment of neuropathic pain, he joined the lab of Dr Peter Grace as a postdoctoral fellow (2020- present). Currently he is working on an NIH-HEAL project to investigate the role of Nrf2 activators in protection against opioid-induced side effects.
